

<b>Title</b>	<b>Demonstrate knowledge of construction and maintenance of working surfaces at an extractive site</b>		
<b>Level</b>	<b>3</b>	<b>Credits</b>	<b>5</b>

<b>Purpose</b>	People credited with this unit standard are able to: evaluate existing features of working surfaces; demonstrate knowledge of the layout of working surfaces for an extractive site; describe construction methods and equipment for working surfaces at an extractive site; and describe methods for maintaining working surfaces at an extractive site.
----------------	---

<b>Classification</b>	Extractive Industries > Extractive Industries Management
-----------------------	--

<b>Available grade</b>	Achieved
------------------------	----------

### Guidance Information

- Performance of the outcomes of this unit standard must comply with the following:
  - Health and Safety at Work Act 2015 (HSW);
  - Health and Safety at Work (General Risk and Workplace Management) Regulations 2016;
  - Health and Safety at Work (Mining Operations and Quarrying Operations) Regulations 2016;
  - Health and Safety at Work (Worker Engagement, Participation, and Representation) Regulations 2016;
  - approved codes of practice issued pursuant to the HSW Act;
  - Resource Management Act 1991;
  - Crown Minerals Act 1991;
  - Territorial and/or Local Authority requirements.
- Any new, amended or replacement Acts, regulations, standards, codes of practice, guidelines, or authority requirements or conditions affecting this unit standard will take precedence for assessment purposes, pending review of this unit standard.
- Definitions
  - Company procedures* mean the documented methods for performing work activities and include health and safety, operational, environmental, and quality management requirements. They may refer to legislation, regulations, guidelines, standard operating procedures, manuals, codes of practice, or policy statements.
  - Industry best practice* may be documented in management plans, control plans, company procedures, managers' rules, occupational health and safety policy, industry guidelines, codes of practice, manufacturers' instructions, and safe working and/or job procedures (or equivalent).
- This unit standard is intended for, but is not limited to, workplace assessment.

- 5 All evidence for assessment against this unit standard must be in accordance with industry best practice and company procedures.

---

## Outcomes and performance criteria

### Outcome 1

Evaluate existing features of working surfaces at an extractive site.

#### Performance criteria

- 1.1 Existing geometric features are evaluated in terms of their effect on site working surfaces.
- Range may include but is not limited to – gradients, potential roads, widths, elevations, alignment.
- 1.2 Existing drainage features are evaluated.
- Range may include but is not limited to – natural water channels, streams, rivers, waterways, inlets, outlets.

### Outcome 2

Demonstrate knowledge of the layout of working surfaces for an extractive site.

#### Performance criteria

- 2.1 Site layout, signposting, and safety controls are explained in accordance with the site safety plans.
- Range may include but is not limited to – safety barriers, speed signs, fences, suitably controlled vehicular access, principal hazard management plans (PHMPs).
- 2.2 The design of stormwater runoff control is explained in accordance with resource consent conditions and site plans.
- Range may include but is not limited to – culverts, open channels, road crown, sumps, discharge, entry.
- 2.3 Specifications for type and quantity of roading materials are described in accordance with projected vehicle loading use, type of mobile plant and equipment in use, and site safety plans.
- Range may include but is not limited to – hardfill, drainage material, sub-base, basecourse, topcourse, sand.

2.4 Roadway geometric layout is explained in accordance with projected usage requirements of vehicles and site safety plans.

Range may include but is not limited to – road width, corner super elevation, gradient, crossfall, alignment.

### Outcome 3

Describe construction methods and equipment for working surfaces at an extractive site.

#### Performance criteria

3.1 The selection process for construction equipment is described in accordance with the site plans.

Range may include but is not limited to – excavator, bulldozer, motor scraper, grader, trucks, front-end loader, dumper, rollers.

3.2 The selection process for road construction material is described in accordance with the site plans.

Range may include but is not limited to – hardfill, sub-base, drainage material, basecourse, topcourse, sand.

3.3 The formation of working surfaces is described in accordance with the site plans.

Range alignment, width, gradient, super elevation, crossfall, crown level, water table level.

3.4 The control of natural waterways encountered is described in accordance with resource consent conditions and site plans.

Range may include but is not limited to – culverts, pipes, field drains, bridges, abutments.

### Outcome 4

Describe methods for maintaining working surfaces at an extractive site.

#### Performance criteria

4.1 Maintenance of road shape and alignment are described in accordance with the site plans.

Range may include but is not limited to – crossfall, undulations, wheel tracking, slips, grader, bulldozer, basecourse material.

4.2 Maintenance and clearance working surface stormwater runoff facilities are described in accordance with the site plans.

Range may include but is not limited to – drains, water tables, sumps, culverts, pipes.
