Title	Evaluate ground conditions and demonstrate knowledge of design of support methods for maintaining stability in underground operations			
Level	6	Credits	15	

Purpose	People credited with this unit standard are able to demonstrate knowledge: of rock mechanics; design the principles for ground support for underground operations; and monitoring and evaluating the performance of ground support systemsmonitoring the performance of the as-built ground
	support against the approved design plan.

Classification	Extractive Industries > Underground Extraction	
Available grade	Achieved	

## Explanatory notes Guidance Information

- 1 Performance of the outcomes of this unit standard must comply with the following: <u>Health and Safety at Work Act 2015 (HSW)</u>;
- Health and Safety at Work (General Risk and Workplace Management) Regulations 2016;
- Health and Safety at Work (Mining Operations and Quarrying Operations) Regulations 2016;
- Health and Safety at Work (Worker Engagement, Participation, and Representation) Regulations 2016;
  - approved codes of practice issued pursuant to the HSW Act.
  - Health and Safety in Employment Act 1992 (HSE);
  - Health and Safety in Employment Regulations 1995;

Health and Safety in Employment (Mining Operations and Quarrying Operations) Regulations 2013;

approved codes of practice issued pursuant to the HSE Act.

- 2 Any new, amended, or replacement Acts, regulations, standards, codes of practice, guidelines, or authority requirements or conditions affecting this unit standard will take precedence for assessment purposes, pending review of this unit standard.
- 3 Joint assessment must be conducted in the assessment of this unit standard because of the high degree of risk. To conduct a joint assessment, two assessors, or one assessor and one technical verifier, must have witnessed the learner undertaking the tasks required in the unit standard and have come to the same conclusion in regards to the learner being competent or not yet competent.

At least one assessor or verifier must hold the unit standard they are assessing on their NZQA Record of Learning.

4 Definitions

*Company procedures* mean the documented methods for performing work activities and include health and safety, operational, environmental, and quality management requirements. They may refer to legislation, regulations, guidelines, standard operating procedures, manuals, codes of practice, or policy statements. *Industry best practice* may be documented in management plans, control plans, company procedures, managers' rules, occupational health and safety policy, industry guidelines, codes of practice, manufacturers' instructions, and safe working and/or job procedures (or equivalent).

5 An *underground operation* includes extractive or tunnelling operations.

# Outcomes and performance criteriaevidence requirements

## Outcome 1

Demonstrate knowledge of rock mechanics.

#### Performance criteria Evidence requirements

- 1.1 The nature and distribution of force effects around openings in underground excavations are explained and analysed in terms of potential ground failures.
  - Range compressive stress, tensile stress, shear stress, strain, elasticity, Young's modulus, Modulus of Rigidity, Poisson's ratio, pillar and ground stiffness, stress distribution.
- 1.2 The distribution of ground force effects is explained in terms of the geological conditions in underground operations.
  - Range includes but is not limited to faulting, folding, gradient, dykes, washouts, fracture zones, in-ground stress orientation, ground water-content, rock permeability, gas, hydrocarbons, depth\_of workings, roadway orientation, rock bursts.
- 1.3 Rock found in underground operations is described and analysed in terms of its support and anchorage properties.
  - Range includes but is not limited to tensile strength, compressive strength, shear strength, hardness, porosity, specific gravity, elasticity, granular structure.
- 1.4 Hazards arising from unpredicted ground movement are identified and described in terms of the stability of the excavation and control measures required.

## Outcome 2

Demonstrate knowledge of <u>thedesign</u> principles for ground support for underground operations.

### Performance criteria Evidence requirements

- 2.1 The characteristics <u>and effectiveness</u> of ground support methods are analysed in terms of the stability of the excavation.
  - Range may include but is not limited to roof bolts, cable bolts, rod bolts, megastrand bolts, <u>split sets</u>, <u>hydraulic supports</u>, mesh, shotcrete, timber props, timber sets, steel sets, poured concrete, <del>trusses,</del> concrete lining.
- 2.2 Ground support requirements for underground operations are evaluated in terms of ground conditions and opening dimensions.

Range <u>pressure distribution force</u> effects, geological characteristics, <u>support methods</u>, <u>support and</u>-anchorage properties, hazards.

## Outcome 3

Demonstrate knowledge of monitoring\_-and evaluating the performance of the as-built ground support against the approved design plan\_systems.

## Performance criteria Evidence requirements

3.1 <u>Monitoring systems are described and evaluated in accordance with industry</u> <u>best practice and company procedures.</u>

> Range deformation and convergence methods, stress cells, sonic extensometer, bolt loading, reinforcement performance methods.

- <u>3.2</u> Ground support ilnspection requirements are described and explained in accordance with industry best practice and company procedures.
- 3.23 The process for reporting deficiencies and departures from the approved design plan in ground support systems, and the response requirements when deficiencies and departures are found to exist, are described in accordance with industry best practice and company procedures, including Trigger Action Response Plans (TARPs).

Planned review date

31 December 20192022

Process	Version	Date	Last Date for Assessment	
Registration	1	25 July 1999	31 December 2017	
Review	2	24 November 2005	31 December 2017	
Rollover and Revision	3	16 July 2010	31 December 2017	
Review	4	18 June 2015	<u>31 December 2019N/A</u>	
<u>Review</u>	<u>5</u>		<u>N/A</u>	

#### Status information and last date for assessment for superseded versions

Consent and Moderation Requirements (CMR) reference	0114
---	------

This CMR can be accessed at <u>http://www.nzqa.govt.nz/framework/search/index.do</u>.

### Please note

Providers must be granted consent to assess against standards (accredited) by NZQA, before they can report credits from assessment against unit standards or deliver courses of study leading to that assessment.

Industry Training Organisations must be granted consent to assess against standards by NZQA before they can register credits from assessment against unit standards.

Providers and Industry Training Organisations, which have been granted consent and which are assessing against unit standards must engage with the moderation system that applies to those standards.

Requirements for consent to assess and an outline of the moderation system that applies to this standard are outlined in the Consent and Moderation Requirements (CMR). The CMR also includes useful information about special requirements for organisations wishing to develop education and training programmes, such as minimum qualifications for tutors and assessors, and special resource requirements.

## Comments on this unit standard

Please contact MITO New Zealand Incorporated info@mito.org.nz if you wish to suggest changes to the content of this unit standard.
